Our Story

Dr. Khaled Sharif
Founder & Medical Director

Dr. Khaled Sharif is an internationally renowned Eye Surgeon who is the Founder and Medical Director of the Sharif Eye Centers Medical Group Inc.; a professional corporation dedicated to providing world-class laser vision correction procedures as well as comprehensive multi-sub specialty eye care in various cities in the Middle East.

Dr. Sharif completed his residency and fellowship training in Great Britain where he worked as an Eye Surgeon for ten years. He was the -first Eye Surgeon to perform LASIK procedures in his country, and was also a pioneer in introducing Implantable contact lens surgery as well as laser cataract surgery and lately the -first UltraLASIK & Contouro Vision procedures. He published a prize winning textbook on Corneal Diseases in Great Britain as well as more than one hundred papers and presentations in European and American Medical Journals.

Dr. Sharif received a fellowship degree from the Royal College of Physicians and Surgeons in Glasgow UK, specializing in eye surgery. One year later, he received a Fellowship Degree from the Royal College of Ophthalmologists in London.

Dr. Sharif is also a consultant for Wavelight Excimer Laser Company (ALCON - USA), and is involved in the training of other Surgeons in many countries on different Refractive Surgery Techniques.

Dr. Sharif has published many articles on the "Diagnosis and Management of Eye Diseases" including a textbook on "Corneal Diseases" which was nominated for the prize of the best medical book published in Britain by the Society of British Authors.

Dr. Sharif has been invited by many countries in the World to give training courses on Eye Laser Surgery (PRK, LASIK, & IntrolASIK) to Eye Surgeons and Medical Doctors. Few years ago, he was invited as a visiting Professor at New York University Medical School and the New York Eye and Ear Infirmary where he gave lectures on the same subject.

Lasik Vision Correction Unit

Different Technologies to fit your vision needs:

We are committed at Sharif Eye Centers to provide the best & the latest vision correction technology available worldwide.

At Sharif Eye Centers we provide 6 different vision correction procedures, to -fit each patient's specific needs.

We provide solutions for Myopia (nearsightedness), Hypermetropia (Farsightedness) and Astigmatism.

Contoura Vision:

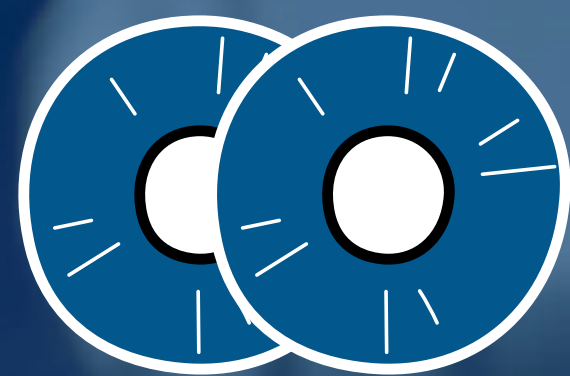

Sharif Eye Centers proudly announce the world's latest vision correction technology Contoura Vision. Contoura Vision maps up to 22,000 elevation points in seconds, to identify each eye print precisely, then to treat each eye according to its unique eye print to customize the treatment.

Contoura Vision optimizes the corneal shape in addition to the customized vision correction, to ensure the best results after this quick procedure. The majority of the patients, who underwent Contoura Vision, had better than 20/20 vision thanks to this technology which treats each point uniquely. Vision exceeding 20/20 and better than glasses or contact lenses now is possible with Contoura Vision.

Implantable Contact Lenses Unit

ICL is a special type of contact lens that can be implanted permanently inside the eye, (behind the pupil), to correct the vision of patients who suffers from severe short sightedness (up to -25.00) or long sightedness (up to + 12.00) that are not correctable with LASIK surgery.

At Sharif Eye Centers we are the First Eye Center in Jordan to be recognized by "Stoor Technologies", the manufacturers of ICL in Switzerland, to be experienced and qualified to provide this technology for our patients.

The ICL procedure takes only 10 minutes per eye and the visual recovery is rapid. We offer this technology to patients who suffer from very high prescriptions, it is also offered to patients for whom LASIK could not be performed due to lack of good corneal thickness (Cornea that is too thin).

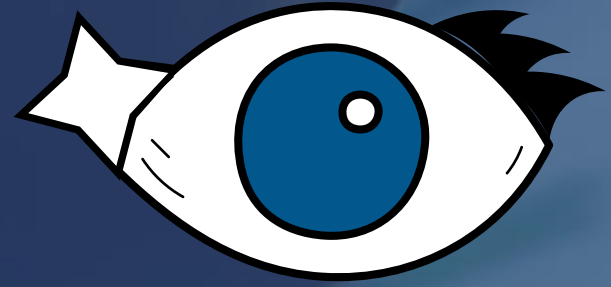

What is the suitable age for having ICL Procedure?

The best age group who benefit from ICL is 21 – 45 years.

Keratoconus Clinic

What is Keratoconus ?

Keratoconus is a progressive eye disease in which the normal regular shape cornea begins to thin and to bulge into a cone-like shape, which makes the cornea irregular and causes distortion of the light passing the cornea to the sensitive retina.

Corneal Cross Linking (CCL)

As Keratoconus is a progressive eye disease the most important part of the treatment plan is to stop the progression of the disease.

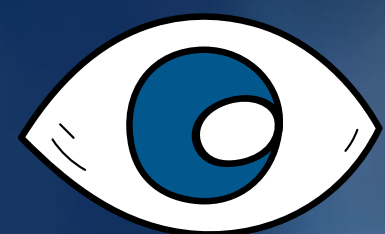

Corneal cross linking is a minimally invasive procedure that uses ultraviolet light and eye drops in order to strengthen the collagen fibers in the cornea to stop the progression.

After stabilizing the cornea and stopping the progression of Keratoconus, we aim to correct the vision for the Keratoconus patient by the latest and most effective procedures that we provide at Sharif Eye Centers.

Cataract Clinic

New technology for a fast and efficient procedure

What is cataract ?

Cataract is a clouding of the natural lens in the eye which leads to a gradual drop of vision. Usually it develops gradually and can affect one or both eyes. Symptoms are faded colors, blurry vision, halos, and night vision problems.

The main cause of cataract is age, but other causes are related to systemic disease, certain systemic medications and genetic disorders.

How do we treat cataract ?

Nowadays treating cataract is very safe and effective. The procedure simply takes about 10 minutes, and the surgeon replaces your cloudy lens with a new artificial clear lens.

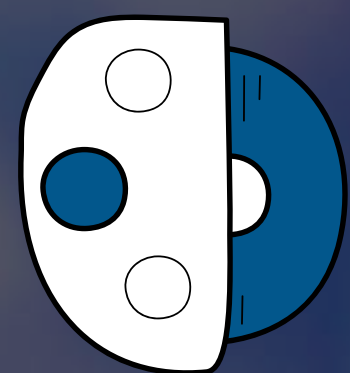

The lens is positioned in the same place as your natural lens and remains a permanent part of your eye.

The procedure is painless and it only requires topical (eye drops) anesthesia. Usually you get back to your regular life style within 3-2 days. Get rid of cataract and both distance and near glasses by one simple procedure. Ask us about premium IOL (intra-ocular lenses) Technology.

مراكز الشريف للعيون

Retina & Diabetic Eye Care Clinic

The procedure is %100 painless and takes few minutes only for both eyes.

Our Retina department provides complete care for all retina related diseases. The department is fully occupied with the latest digitalized high resolution ocular imaging systems. And recently we adopted the OCT-A which captures the very fine blood vessels in the retina without the need of injecting a dye.

The department is headed by consultants with wide experience locally and internationally and licensed from UK and USA

Diabetic retinopathy

Unfortunately, it can cause blindness if not treated at the right time

Diabetic retinopathy is one of the diabetes complications, in which a damage of the fine blood vessels of the light-sensitive tissue at the back of the eye occurs. At first, diabetic retinopathy may cause no symptoms or only mild vision issues.

Pediatric & Squint Unit

Our pediatric ophthalmology unit is occupied with state of the art technologies to accommodate your child's needs, starting from day 1 until the age of 18, we carry all the customized tools and provide all kind of treatments to meet your needs.

Our doctors are consultants in this specialty and they are trained and licensed in UK, USA and Canada.

Asthenopia (tired eye) after using digital devices might be an indication of having vision problems. .

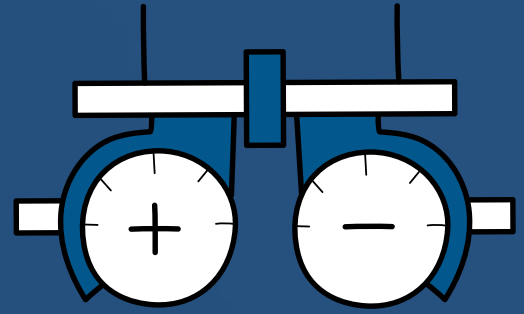

Pediatric Ophthalmology Services :

- Full eye exam from day 1 till the age of 18.
- Retina check for premature babies.
- Squint and eye muscles full exam.
- Surgical and non-surgical treatments for imbalanced eye muscles.
- Treatment for allergies and vernal catarrh.
- Amblyopio (lazy eye) treatment.
- Congenital Cataract treatment.
- Congenital glaucoma treatment.

Glaucoma Unit

Glaucoma is a complex disease in which damage to the optic nerve fibers, causes progressive, irreversible vision and visual field loss. One of the modifiable risk factors that we monitor and treat is abnormal eye pressure.

Why does the intraocular pressure increase ?

Human eye has a fluid called the aqueous humor, this fluid drains from very fine canals right at the corner where the iris and the cornea meets. This system is very sensitive and any problem affecting this drainage will result in an increase in IOP and causes pressure on the nerve fibers of the optic nerve. Consequently, there will be damage to these sensitive fibers and permanent vision loss.

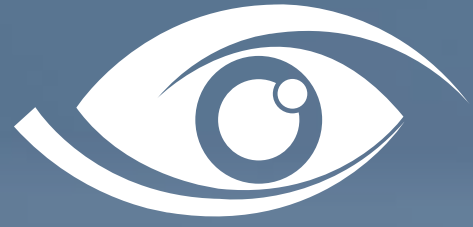

Glaucoma treatment :

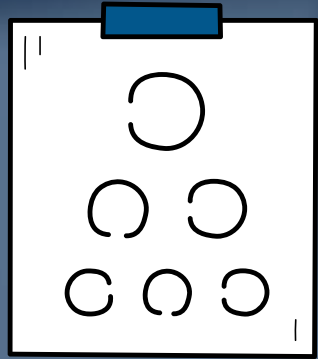

After examining your eyes and precisely the optic nerve and the pressure of your eyes, your doctor will decide the best treatment plan for your situation, the majority of patients are treated with eye drops to lower the pressure, and however some case may need special kind of laser to decrease the eye pressure.

In advanced cases where the eye drops and lasers are not doing the needed job to decrease the eye pressure, surgical intervention will be the choice.

Specialty Contact Lenses & Glasses Unit

o serve our patients the way they deserve, we aim to provide the best quality of contact lenses, designers sunglasses and optical frames.

We provide :

- Wide variety of Optical frames
- Kids frames (sunglasses and optical)
- Design Sunglasses for all ages
- The best ophthalmic lenses from ZEISS, KODAK, ESSILOR & much more .

What's New at Sharif Eye Centers :

Scleral lenses are now available.

Whatever your corneal condition is, with scleral lenses you will experience exceptional vision especially for when RGPs or Hybrid lenses are bothering them.

Scleral contact lenses can now be tailor made to fit your corneal shape precisely, if you have had a corneal transplantation, or severe Keratoconus or any corneal irregularity, scleral contact lenses will make a huge difference in how you see life.
